

3C Integra: Integrated card payment solutions for hospitality and leisure

Seamless card payment processing for property management, point of sale, spa and club solutions
For destinations, hotels and resorts, leisure centres, day spas and fitness clubs

The world leading integrated card payment processing solution for the hospitality market, 3C Integra provides two-way real time integration with core systems PMS, POS and spa. With global vendor alliances, allowing you to retain bank of choice. 3C meets global PCI, EMV and 3DES compliances.

Purpose:

3C Integra automates what is now a manual environment processing payments, reconciling and managing credit and spend for each card holder, guest by guest, card by card. It eliminates many daily manual procedures in the PMS and POS, providing end-to-end connectivity between these systems and your bank, in real time.

By automating and validating cards online, 3C Integra eliminates card fraud or theft, identifies available credit or insufficient funds, eliminates tedious manual reconciliation, provides instant payment, and closes the gap in entirety between the PMS, POS and Spa and your bank.

Optional DCC (Dynamic Currency Conversion) is also available to hotels and resorts using property management systems, allowing guests to settle accounts in their home card currency and at the same time your establishment earns valuable commissionable revenue for it.

Solution:

3C Integra gives you control! Real-time integrated payment processing for credit and debit cards with your existing property management and point of sale systems.

- Global presence and proven solution with PMS, POS and SPA
- Single site or multi-property scalable
- Retain bank of choice for acquiring and settlement
- Real-time online card validation and instant approval
- Meets full compliances and security for PCI, EMV and 3DES
